Lightweight boards enable ease of installation
Custom designed profiles & finishes also available
Delivery Australia Wide

Why Australian Timber Ceilings?

We are a leading supplier of hardwood timber lining boards across Australia. Our collection of solid wood boards will bring natural warmth and architectural sophistication to your residential or commercial space.

Our sustainably sourced Paulownia is a hardwood and although it has a light weight density, its grain structure and texture make it a perfect material for this type of application. It offers a cost advantage over our other hardwoods.

However, we also offer the broadest selection of timbers in our lining board range - more than any other company. Whether you are looking for Rosewood, Silver Ash, Coastal Blackbutt, French Oak for example, we can custom design profile & finish to your specification.

CALL US FOR YOUR SAMPLE OR QUOTE.

TASMANIAN OAK UV 90mm

WALNUT MATTE 90mm

"We use Australian Timber Ceilings for the portico entry & alfresco areas for homes in Melbourne and on Queensland's Sunshine Coast. It's a premium product backed by a professional knowledgeable team."

TECHNICAL DATA

All our lining boards are made from solid natural timber. The Paulownia range is 3.6 lm in length with a factory joint partway along board. Other Hardwoods are supplied in random lengths, depending on timber species.

Standard Paulownia Range:
Secret nail Tongue & Groove VJ & Shiplap profiles available in two cover widths:
- 90 mm x 9 mm x 3.6 lm
-130 mm x 12 mm x 3.6 lm

Matching cover trims:
35mm x 9mm x 3.6 lm double bull-nosed
15mm x 15mm x 3.6 lm square
25mm x 25mm x 3.6 lm square

1. Measure your space in square metres.
2. Allow a minimum of an extra 5%.
3. Order the square metres required.
4. We ship to you directly Australia wide.

SPOTTED GUM MATTE 90mm

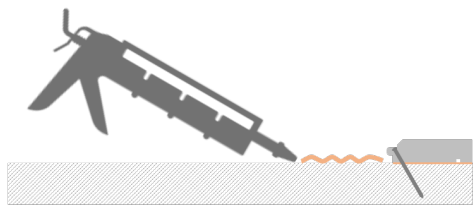

WHITE UV 90mm

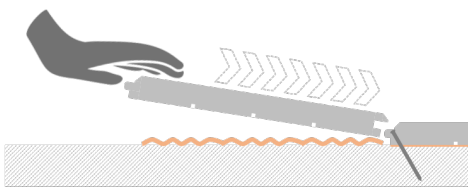

Simple Installation

1. Apply polyurethane adhesive to the founding ceiling or wall's surface/batten.

2. Slide in the following lining board at an angle, thereby ensuring excess glue does not lump between boards and prevent effective joint.

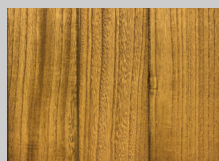

3. Secret nail through the protruding tongue at a 45 degree angle, making certain nail head sits below tongues surface to enable an effective join with the following boards.
